PROFESSIONAL SUMMARY

Results-oriented Product & Growth Data Analyst with 4+ years of experience translating complex data into actionable insights that drive user acquisition, retention, and product engagement. Proficient in SQL, Python (Pandas, NumPy, SciPy, Scikit-learn), and BI tools including Power BI and Tableau. Hands-on experience designing A/B and multivariate experiments, building scalable self-service dashboards, and applying statistical modelling (clustering, supervised learning, regression) to solve high-impact product and business problems. Proven collaborator across product, engineering, and business teams — skilled at converting product questions into measurable outcomes. Eager to bring analytical rigour and growth-first thinking to Moniepoint's payment products to accelerate user growth and optimise product performance at scale.

CORE COMPETENCIES

- | | |
|---|---|
| ▶ A/B Testing & Multivariate Experimentation | ▶ Power BI (DAX), Tableau, Looker |
| ▶ Product Growth Metrics (DAU, MAU, LTV, Churn) | ▶ Statistical Modelling & Predictive Analytics |
| ▶ SQL (Advanced) — Querying & Data Modelling | ▶ ETL Pipeline Design & Data Engineering |
| ▶ Python: Pandas, NumPy, SciPy, Scikit-learn | ▶ User Segmentation & Clustering |
| ▶ Funnel Analysis & Conversion Optimisation | ▶ Opportunity Sizing & Impact Analysis |
| ▶ Self-Service Dashboard Development | ▶ Stakeholder Communication & Data Storytelling |

PROFESSIONAL EXPERIENCE

Lead Product & Growth Data Analyst · **Timi Tech Digital Consult — Uyo, Nigeria** · Sept 2023 – Present

Spearhead end-to-end analytics for product development cycles, growth experiments, and performance monitoring across business and product teams.

- **Growth & Funnel Analytics:** Designed and maintained product funnel dashboards tracking user acquisition, activation, retention, and churn metrics, providing weekly visibility of KPIs to product managers and business stakeholders.
- **Experimentation & A/B Testing:** Led hypothesis-driven experiments across product features — designed test/control group frameworks, calculated statistical significance using SciPy, and delivered post-launch impact analyses informing product decisions.
- **Scalable Self-Service Dashboards:** Built 10+ interactive Power BI and Tableau dashboards consumed autonomously by sales, marketing, and growth teams — reducing ad-hoc data requests by 40% and accelerating decision cycles.
- **Opportunity Sizing:** Translated product and business questions into quantitative analyses including opportunity sizing, user segmentation, and revenue impact modelling to prioritise product roadmap features.
- **Statistical Modelling:** Applied clustering (K-Means), regression, and supervised learning (Scikit-learn) to segment users by behaviour and predict engagement drop-off, enabling targeted retention interventions.

- **Cross-functional Collaboration:** Partnered directly with product managers, data engineers, and marketing teams to define data requirements, instrument event tracking, and ensure analytics readiness ahead of product launches.
- **Training & Capability Building:** Trained 100+ analysts and business professionals in SQL, Python, and Power BI — driving data literacy and enabling self-service analytics across teams.

Junior Data Analyst · Data Science Nigeria — Uyo, Nigeria · Jan 2020 – Aug 2022

Delivered quantitative analysis, pipeline automation, and product-shaping insights across operational and growth analytics use cases.

- **Workflow Automation:** Automated reporting workflows using Python and SQL, reducing manual data processing effort by 40% — freeing analyst capacity for higher-value analytical work.
- **Product KPI Monitoring:** Built and maintained interactive Power BI dashboards tracking product and business KPIs for executive reporting, enabling real-time performance monitoring.
- **Statistical Analysis:** Conducted SPSS and Python-based statistical analyses on sales and operational datasets — applying correlation, regression, and trend analysis to surface actionable insights.
- **Data Pipeline Engineering:** Designed and maintained ETL workflows ingesting, transforming, and structuring large datasets, ensuring clean, reliable data feeds into analytics and modelling environments.
- **User Behaviour Analysis:** Analysed demographic and behavioural data across user cohorts to identify patterns in engagement and performance, informing product and content strategies.
- **Stakeholder Reporting:** Translated complex data findings into clear, actionable narratives for non-technical stakeholders — presenting insights across product, sales, and operations teams.

KEY PROJECTS — GROWTH & PRODUCT ANALYTICS

Predictive Retention Model — Patient Readmission Risk

- Built a supervised ML classification model (Scikit-learn) to predict high-risk user drop-off — directly analogous to payment product churn prediction — achieving actionable segmentation of at-risk cohorts.
- Designed the full analytics pipeline: data ingestion → feature engineering → model training → validation → Power BI dashboard for business consumption, demonstrating end-to-end product analytics ownership.
- Framed as a hypothesis-driven experiment: established baseline metrics, defined success criteria, and measured post-model impact against a holdout control group — mirroring A/B test design principles.

User Segmentation & Engagement Analytics Dashboard

- Applied K-Means clustering in Python to segment users across demographic and behavioural dimensions, enabling personalised engagement strategies — a direct parallel to payment product user acquisition targeting.
- Built a self-service Tableau dashboard exposing segment-level KPIs (engagement rate, retention curve, conversion funnel) — adopted by the growth team as the primary performance monitoring tool.
- Conducted opportunity sizing analysis to quantify the revenue impact of improving conversion at each funnel stage, prioritising intervention areas by expected ROI.

Large-Scale ETL Pipeline & Data Quality Engineering (100,000+ Records)

- Engineered a robust ETL pipeline using Python (Pandas) to ingest, clean, and restructure 100,000+ records — implementing automated data quality checks and validation logic for reliable downstream analytics.
- Designed scalable data models to support efficient SQL querying for product metric reporting, reducing dashboard query times by 60%.

EDUCATION

M.Sc. Protein Biochemistry *(In View)*

University of Uyo, Nigeria | 2024 – Present

Postgraduate research in quantitative biological systems — strengthening statistical reasoning, hypothesis design, and data-driven scientific thinking.

B.Sc. Biochemistry

University of Uyo, Nigeria | 2015 – 2019

Strong quantitative and analytical foundation — directly underpins data modelling, experimental design, and statistical analysis skills.

CERTIFICATIONS & CONTINUOUS LEARNING

- Data Analysis & Wrangling — Data Campus Africa
- Data Management & Governance — iCode Africa
- A/B Testing & Experimentation Design — Self-directed (applied across analytics projects)
- Statistical Modelling with Python (SciPy, Scikit-learn) — Applied practitioner
- Tableau for Product Analytics — Applied practitioner

TECHNICAL STACK

Languages	Python (Pandas, NumPy, SciPy, Scikit-learn), SQL (Advanced)
BI & Viz	Power BI (DAX), Tableau, Looker, Jupyter / iPython Notebooks
Analytics	A/B Testing, Multivariate Testing, Clustering, Regression, EDA
Product	Funnel Analysis, Cohort Analysis, Retention Modelling, LTV / Churn
Data Eng.	ETL Pipeline Design, Data Cleaning, Data Modelling, SPSS
Soft Skills	Data Storytelling, Stakeholder Communication, Cross-functional Collab.

ADDITIONAL

- Languages: English (Fluent), Igbo (Fluent)
- Volunteer: HIV/AIDS Awareness Campaign — data-driven health communication campaign reaching 5,000+ students, demonstrating ability to translate insights into impactful, audience-specific messaging.
- Portfolio: <https://v0-francis-bright-landing-page.vercel.app/> | GitHub: github.com/FrancisBright1
- Availability: Immediately available for full-time engagement
